EDUCATION

University of Michigan — Expected May 2028
B.S. in Computer Science and Economics — Ann Arbor, MI

- **GPA:** 3.66 / 4.0
- **Coursework:** Data Structures & Algorithms, Intro to Statistics and Data Analysis, Microeconomics, Macroeconomics, Discrete Mathematics, Calculus III, Physics (Mechanics)

PROJECTS

Granular Synthesizer Plugin | *C++, JUCE, VST3, AU, CMake* — github.com/Verdent06/granular-synth
Real-time audio DSP plugin built from scratch in C++/JUCE — sine oscillator through full granular engine with lock-free threading and release-ready VST3/AU binaries

- Wired UI-to-audio delivery through a hand-rolled SPSC FIFO (64-slot fixed array, atomic head/tail with acquire/release ordering) so slider changes reach the audio thread without a mutex — and routed WAV handoff via atomic shared_ptr swap so the UI thread never blocks processBlock().
- Enforced the audio thread's zero-allocation constraint by pre-allocating a MemoryPool<Grain, 64> slab per voice at plugin startup — a fixed free-list that acquires and releases grain slots without touching the heap — so processBlock() never calls new or delete after prepareToPlay() completes.
- Configured CMake to compile VST3 and AU bundles from a single JUCE codebase — targeting a macOS universal binary (arm64 + x86_64) for native Apple Silicon and Intel — and audited every processBlock() path against a real-time safety checklist confirming zero heap allocations and zero lock acquisitions before release builds.

EXPERIENCE

Michigan Data Consulting (MDC) — Jan 2026 – May 2026
Data Engineer — Michigan Campaign Finance Network — Ann Arbor, MI

- Replaced manual Michigan campaign-finance research — portal searches capped by the Bureau of Elections, irregular Excel exports, hand normalization at ∼2 hours per committee — with a Requests + Pandas ETL that ingests filings directly, eliminating ∼800 hours of manual pulls across 400 tracked PACs.
- Delivered a production Flask REST API on AWS EC2 as the sole engineer on a 5-month MCFN contract, wiring ingested data and PAC rankings into the nonprofit's public-facing research workflow.
- Architected a deterministic aggregation engine that parses those exports, normalizes irregular contribution amounts, and ranks PACs by total funding volume so researchers stop rebuilding spreadsheets to surface top spenders.

Vylet — May 2026 – Present
Founder — Automated lead-sourcing platform for PE/search-fund; live product generating $1,500 MRR across three paying clients — vyletdata.com

- Engineered Node 3 as a pure-Python triangulated consensus gate — no LLM calls — that computes a 0–100 lead score by fuzzy-matching the pipeline query, state business registry, and live website crawl in a three-way weakest-link check, then hard-fails leads on legal status, industry, geography, or independence before the score threshold applies.
- Diagnosed a name-collision defect in ownership-verification logic that was incorrectly rejecting valid acquisition targets sharing a name with an unrelated business elsewhere; the fix lifted the pipeline's lead-qualification rate from 79% to 89% with zero change to sourcing volume.

CaseStudyPrep.AI — Dec 2025 – May 2026
Software Engineer Co-op (Voice AI) — Remote

- Eliminated the silent-audio problem in a voice-AI product — most frames sent to Whisper were dead air — by running Silero VAD client-side via ONNX Runtime, filtering silence before upload and cutting cloud inference costs by 40%.
- Moved audio processing off the UI thread into a Web Worker with an async stream handoff, reducing main-thread blocking time to under 5ms and keeping the real-time audio visualizer at a smooth 60 FPS during active inference.

TECHNICAL SKILLS

Languages .... Python, C++, TypeScript, SQL
Frameworks .... Flask, JUCE
Cloud & Infrastructure .... AWS (EC2), Git
