EDUCATION

University of Michigan Expected May 2028
B.S. in Computer Science and Economics Ann Arbor, MI

- **GPA:** 3.66 / 4.0
- **Coursework:** Data Structures & Algorithms, Intro to Statistics and Data Analysis, Discrete Math, Calc III

EXPERIENCE

Michigan Data Consulting (MDC) Jan 2026 – May 2026
Data Engineer — Michigan Campaign Finance Network Ann Arbor, MI

- Replaced manual Michigan campaign-finance research — portal searches capped by the Bureau of Elections, irregular Excel exports, hand normalization at ∼2 hours per committee — with a Requests + Pandas ETL that ingests filings directly, eliminating ∼800 hours of manual pulls across 400 tracked PACs.
- Architected a deterministic aggregation engine that parses those exports, normalizes irregular contribution amounts, and ranks PACs by total funding volume so researchers stop rebuilding spreadsheets to surface top spenders.
- Delivered a production Flask REST API on AWS EC2 as the sole engineer on a 5-month MCFN contract, wiring ingested data and PAC rankings into the nonprofit's public-facing research workflow.

Vylet May 2026 – Present | vyletdata.com
Founder — Automated lead-sourcing platform for PE/search-fund; live product generating $1,500 MRR across three paying clients

- Architected a custom asyncpg Data Access Layer storing Gemini embeddings alongside source records; engineered injection-safe SQL timestamp validation that detects stale entries and triggers automatic re-scrapes, keeping the lead database fresh without manual intervention.
- Diagnosed a name-collision defect in ownership-verification logic that was incorrectly rejecting valid acquisition targets sharing a name with an unrelated business elsewhere; the fix lifted the pipeline's lead-qualification rate from 79% to 89% with zero change to sourcing volume.
- Launched Vylet, automating a ∼30-minute manual process per business into a Dockerized LangGraph pipeline generating 30 scored leads in 30 minutes — a 30x speedup — with Redis/Celery workers on a recurring cycle.

Lyndbrook Capital Feb 2026 – Apr 2026
Data Engineering Consultant Remote

- Contracted pre-LOI to build acquisition intelligence for a boutique search fund targeting water utility operators; aggregated EPA ECHO and MassGIS regulatory data into a unified PWSID entity database and delivered 800+ validated Day-1 acquisition targets within the engagement window.
- Automated off-market deal sourcing by aggregating 2,500+ legal entities from EPA compliance databases and cross-referencing Google Maps API data to surface unlisted acquisition targets, eliminating 15 hours of manual prospecting per week for the fund's Principal.
- Built a Review Velocity scoring algorithm that proxied fleet expansion and operational scale from public compliance data, filtering 800 acquisition targets down to a 280-lead qualified shortlist — a 35% precision rate against the fund's revenue criteria.

PROJECTS

SignalWeaver | *FastAPI, React, Postgres, pgvector* github.com/Verdent06/SignalWeaver

- Implemented semantic search over stored financial news with pgvector cosine similarity (768-d MPNet embeddings), hitting 49ms p50 / 99ms p99 over 90 queries returning top-5 or top-10 matches.
- Built a React/TypeScript dashboard for composite scores and fundamental/sentiment/macro breakdowns; used it to analyze 90 distinct tickers with scores persisted to Postgres for history views.
- Served composite financial-research scores through async REST endpoints (FastAPI) wrapping fundamentals, MPNet sentiment, and regression logic, instrumented end-to-end at 9.1s p50 / 15.2s p99 across 90 successful runs on 90 tickers.

TECHNICAL SKILLS

Languages .... Python, SQL
AI / ML .... Pandas, LangGraph
Cloud & Infrastructure .... AWS (EC2), Docker, Celery
