

Vedant Desai

(248) 704 – 4852 | vedantde@umich.edu | github.com/Verdent06 | linkedin.com/in/vedantde06

EDUCATION

University of Michigan

B.S. in Computer Science and Economics

Expected May 2028

Ann Arbor, MI

- **GPA:** 3.66 / 4.0

- **Coursework:** Data Structures & Algorithms, Intro to Statistics and Data Analysis, Discrete Math, Calc III

EXPERIENCE

Vylet

May 2026 – Present | vyletdata.com | GitHub

Founder — Automated lead-sourcing platform for PE/search-fund acquisition prospecting — live product generating \$1,500 MRR across three paying clients

- Launched Vylet, automating a 30-minute manual process per business into a Dockerized LangGraph pipeline generating 30 scored leads in 30 minutes — a 30x speedup — with Redis/Celery workers on a recurring cycle.
- Engineered a LangSmith eval pipeline spanning 20 adversarial business test cases across 13 archetype labels — manufacturers, SaaS tools, PE holding companies, geographic mismatches — then layered deterministic Pydantic consensus gates to lift extraction faithfulness from 50% to 90%.
- Grew Vylet from 1 to 3 paying subscription clients within six weeks of launch — spanning workforce-software, landscaping, and geography-first sourcing engagements — generating \$1,500 in monthly recurring revenue.
- Architected a custom asyncpg Data Access Layer storing Gemini embeddings alongside source records; engineered injection-safe SQL timestamp validation that detects stale entries and triggers automatic re-scrapes, keeping the lead database fresh without manual intervention.

CaseStudyPrep.AI

Dec 2025 – May 2026

Software Engineer Co-op (Voice AI)

Remote

- Eliminated the silent-audio problem in a voice-AI product — most frames sent to Whisper were dead air — by running Silero VAD client-side via ONNX Runtime, filtering silence before upload and cutting cloud inference costs by 40%.
- Eliminated a 27% audio upload failure rate with fault-tolerant RxJS logic that detects expired S3 presigned URLs, regenerates them mid-flight, and negotiates MIME types for WAV files Angular silently rejected.

Michigan Data Consulting (MDC)

Jan 2026 – May 2026

Data Engineer — Michigan Campaign Finance Network

Ann Arbor, MI

- Replaced manual Michigan campaign-finance research — portal searches capped by the Bureau of Elections, irregular Excel exports, hand normalization at 2 hours per committee — with a Requests + Pandas ETL that ingests filings directly, eliminating 800 hours of manual pulls across 400 tracked PACs.
- Delivered a production Flask REST API on AWS EC2 as the sole engineer on a 5-month MCFN contract, wiring ingested data and PAC rankings into the nonprofit's public-facing research workflow.

PROJECTS

SignalWeaver | *PyTorch, scikit-learn, Transformers, LoRA, LangGraph* | github.com/Verdent06/SignalWeaver

- Lifted financial-sentiment classification accuracy from 81% to 96% by LoRA fine-tuning a quantized meta-llama/Meta-Llama-3.1-8B-Instruct model on 3,454 Financial PhraseBank entries, evaluated on a held-out test set.
- Built a linear regression combining fundamental, embedding-based sentiment, and LLM-derived sentiment signals into a composite return-prediction score; validated out-of-sample ($3.39\% R^2$, consistent with the low single-digit R^2 typical of real return-prediction literature) to confirm the model wasn't just fitting noise.
- Orchestrated a 5-node LangGraph pipeline (fetch → classify → embed → score → explain) with per-node timing from the same 90-run batch: fetch 7.3s p50, classify 1.1s p50 (~29ms/article over 40-article batches), embed 1.1s p50, score under 1ms p50, explain 3ms p50 — fetch dominated wall time (~80% of p50 latency).

TECHNICAL SKILLS

AI / ML LangGraph, LangSmith, Silero VAD, ONNX Runtime, Pandas, PyTorch, scikit-learn
Languages Python, C++
Frameworks Flask, Angular, RxJS
Cloud & Infrastructure AWS (EC2, S3), Docker, Redis, Celery, Git
