EDUCATION

Michigan State University

B.S. in Computer Science

Expected Graduation, 2027

East Lansing, MI

- **Relevant Coursework:** Linear Algebra, Discrete Mathematics, Object-Oriented Software Design, Computer Organization and Architecture, Data Structures & Algorithms

EXPERIENCE

Claude Builder Club @ MSU

Vice President & Co-Founder

Oct. 2025 – Present

East Lansing, MI

- Eliminated manual onboarding entirely by automating member provisioning (GitHub API + Slack SDK) to grant full repo and workspace access in 30 seconds, cutting setup time 97% across 100+ members.
- Architected event-driven attendance infrastructure using QR token generation backed by AWS S3 caching, replacing manual sign-in with real-time tracking and cutting processing overhead by 80%.
- Engineered GitHub Actions CI/CD pipeline with enforced 90% coverage gates across 30+ tests and branch protection rules on all production merges, reducing bug escape rate by 65%.

MindMosaic

Software Engineer

Aug. 2025 – Nov. 2025

East Lansing, MI

- Designed PostgreSQL + Neo4j persistence with Docker Compose parity for one-command local setup and no config drift vs. staging.
- Refactored Cypher with relationship-type indexing, cutting p95 latency 48% (850ms → 440ms) and making recursive traversals 3× faster than SQL joins.
- Kept 85% JUnit/Jasmine coverage with GitHub Actions + branch protection so untested merges never reached production.

PROJECTS

Dadei — Ambient AI Assistant | *Docker, FastAPI, PostgreSQL, pgvector, Redis, RQ, Alembic, GitHub Actions, Unicorn*

May 2025 – Nov. 2025

dadei.app

- Eliminated release drift with pinned Docker images, `docker-compose` dev parity, and prod starts that always run `alembic upgrade head` before Unicorn so schema, `pgvector` indexes, and extension grants never trail the app across rollbacks.
- Hardened CI via GitHub Actions matrix: Ruff on `app/` and `tests/`; pytest + migrations against `pgvector/pgvector:pg15`; DB job asserting `CREATE EXTENSION vector`—cutting migration-caused broken deploys an estimated **[TBD]**%.
- Made background work safe with or without Redis: inline `BackgroundTasks` fallback, Redis/RQ + SHA-256 idempotency when enabled, and per-network locks for conversation closes—sustained ingest **[TBD]** → **[TBD]** interactions/min in soak tests without duplicate side effects.
- Scaled to **100+** registered customer networks on managed infrastructure using pooled Postgres, health-gated rollouts, and Redis webhook dedupe so multi-device fan-out does not amplify identical events; duplicate deliveries fell **[TBD]**% in long soak tests.

WizViz — SpartaHack X | *Python, MediaPipe, OpenCV, TensorFlow, NumPy*

Feb. 2025

devpost.com/software/wizviz

- Won Interactive Media track at SpartaHack X; on-device MediaPipe pose pipeline and custom 2D physics at 60 FPS (portfolio on Devpost).

TECHNICAL SKILLS

Languages Python, Java, JavaScript/TypeScript, SQL, Cypher, Golang, C++, Bash
Frameworks FastAPI, Spring Boot, Node.js, React, Vite, Electron, RQ
Databases PostgreSQL, Neo4j, Redis
Cloud & Infrastructure AWS (EC2, RDS, S3), Docker, GitHub Actions, CI/CD Pipelines
