FOX News Media — Spring 2027 Internship Program, Data Analytics
1211 Avenue of the Americas, New York, NY

Re: Spring 2027 FOX News Media Internship Program - Data Analytics - New York (Workday R50033950)

I am applying for the Spring 2027 FOX News Media Data Analytics intern seat in New York — req **R50033950** — not the general FOX News Media intern (R50033955), not FOX Sports Audience Research (R50033944), and not FOX Technology (R50033932). I want a placement in **Programming Analytics**, with **Business Intelligence** as my second interest. My office location of choice is **New York**.

I am a B.S. Computer Science and Economics student at the University of Michigan (Expected May 2028, GPA 3.66, Junior). I am a U.S. citizen and will not need visa sponsorship. I can work on-site in New York from Monday, February 8, 2027 through Friday, April 16, 2027 at 16–24 hours per week, and I will source my own housing and transportation. FOX does not provide housing.

This intern job is applied data work: turn messy operational data into a ranking, KPI, or dashboard a programming or news stakeholder can use. That is the work I already do. I have not interned in a newsroom and I have not used Tableau, Power BI, Nielsen, or Comscore. I will not pretend otherwise.

What I can defend:

- **Business Intelligence analog — messy filings → ranked report a non-builder used.** At Michigan Data Consulting I replaced portal searches and irregular Excel exports (~2 hours per committee) with a Requests + Pandas ETL, then ranked PACs by funding volume so Michigan Campaign Finance Network researchers stopped rebuilding spreadsheets. That eliminated ~800 hours of manual pulls across 400 tracked PACs. I shipped a Flask REST API on AWS EC2 as the sole engineer on a five-month contract and scoped delivery with the nonprofit.
- **Programming Analytics analog — a score that filtered a list against a criterion.** At Lyndbrook Capital I built a Review Velocity score that filtered 800 acquisition targets to a 280-lead shortlist (35% precision) and delivered 800+ validated Day-1 targets inside the engagement window.
- **News-adjacent dashboard.** On SignalWeaver I built a React/TypeScript dashboard over composite scores that combine fundamentals, macro indicators, and news sentiment (research assistant, not investment advice), persisted in Postgres, for 90 tickers. That is a dashboard analog, not a FOX ratings workbook.

SQL on my resume is an asyncpg freshness / re-scrape check on Vylet, the lead-sourcing product I run (\$1,500 MRR, three clients). Ranking and KPI work was Pandas/Python. If you ask for analysis SQL, I will say that out loud.

I study current events and business news as an Economics student and will walk specific FNC/FBN programming in an interview rather than name-drop shows I cannot discuss. I want this Data Analytics req, on-site in New York, in Programming Analytics or Business Intelligence.
